

Hot Topics in Construction Health & Safety

A Full Day PDC Seminar with Industry Experts

Stimulus Plan to Fuel Construction Boom

Construction may have slowed lately but with the recently passed government stimulus plan a construction boom maybe on the horizon increasing the need for health and safety professionals in the field. Construction has historically had some of the highest incidences of employee injuries and fatalities. It also has some of the highest incidence employee exposures to agents like silica, lead, asbestos, welding fumes, noise, etc. Recent accidents such as those in New York city and the fatalities at Las Vegas' City Center projects exemplify the need for well trained health and safety personnel in this industry. During this full day PDC, industry experts will converge to discuss current issues and developments.

Topics :

- Noise and hearing conservation in construction
- OSHA standards update/review
- Safety issues at construction sites
- Health & Safety Concerns during design
- Employee exposure concerns in construction
- Up-dates: cranes & derricks safety
- Fall protection, NORA agenda, and much, much more.

Speakers:

- Larry Joswiak, MPH — OSHA
- Lee Hager, Aearo
- Paul Flentge, CHST — Pepper Construction
- Don Garvey, CIH — 3M
- Michael Ladd CIH, CSP — CNA
- Tom Barilich, AIG
- Eugene Satrun CIH, CSP — NORA Construction Committee
